

WindTech Istanbul 2011

Welcome to WT 2011 Offshore Conference & Wind Energy and Wind Technologies Trade Fair!

The most basic energy consumption for the industry and development of a country is the electrical energy. Fossil fuels, hydraulic power plants, thermal power plants and nuclear power plants are available in order to provide the supply for this. When the energy demand, which is increasing continuously and the global warming, is considered, all of these production forms shall either be finished or they shall have to be developed. Therefore, it becomes inevitable to steer towards alternative resources.

WindTech is looking forward to welcoming you to the one and only platform for wind energy and wind technologies in Istanbul at 17-19 November 2011.
